

# Why Choose Abodo's Vulcan Timber?

Carefully Crafted Timber

## Vulcan is Abodo's premium timber

- Virtually knot free sourced from clears grade timber with no visible defects.
- Treated to Australian standards and proven to be resistant to Australian termites.
- Vulcan's engineered vertical grain is crafted through a patented lamination method resulting in superior stability, straightness, and structural spanning capability.
- Versatile feature timber as an architectural profiled cladding board or facade screening in assorted sizes up to 290x180mm.
- Thermally modified using a proprietary schedule to 230°C – a critical temperature to achieve exterior durability for softwood such as Radiata Pine.
- Our purpose-built kilns are equipped with a world class quality control system to ensure every piece of modified timber meets this high durability standard.

## Builder-friendly and built to last

- Fast and easy to install with its tongue and groove weatherboard system and secret fixing option.
- Available in long lengths preferred by builders.
- Protector coating has been developed and tested specifically for Vulcan timber for optimal performance. Vulcan is an optimal timber for Sioo:x Wood Coating performance.
- Less cupping and warping in service with a low moisture content of 7-9%.
- No resin leaching with almost all the tannins removed in the thermal modification process.

Vulcan Cladding <

### Lifetime beauty

- 15 years Built to Last Warranty.
- An ideal timber choice for both exterior and interior applications, such as battens, fins, posts, beams, cladding and joinery.
- Suitable for coating with dark colours, including black.

### Cladding finishes:

Bandsawn

Brushed

### Climate-conscious design

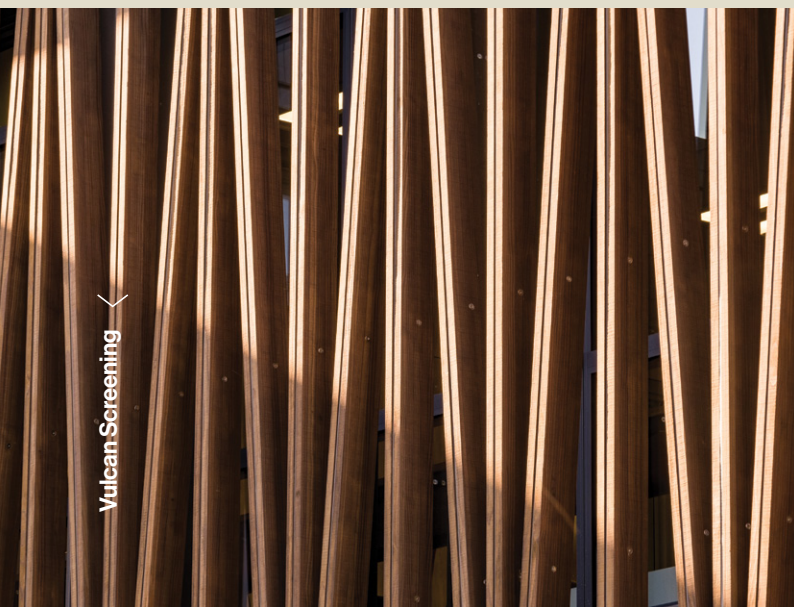

- Vulcan timber is made from FSC® certified plantation New Zealand grown Radiata Pine with full Chain of Custody certification.
- Declare Certified 'Red List Free' by the Living Futures Institute.
- Verified carbon negative timber as evidenced by an Environmental Product Declaration (EPD).
- Efficient local supply chain minimises embodied energy, with initial wood processing occurring next to the forest then shipped to regional ports in Australia for local market processing.
